Abstract (Basic): DE 3006158 A

In the prodn. of bird food by enrichment of cereal grains by introducing into a soln. contg. active substances and subsequently drying, the cereal grains are of oats and before introducing into the soln. are broken so as to expose their cross-section. Pref. the oats are hulled and then converted into groats using conventional equipment. Alternatively, each grain is broken at several points along its long axis to give pref. 2-4 pieces.

Used in prodn. of bird food enriched so as to give a predetermined protein and vitamin content. The broken oat grains have improved absorbercy for the active substance soln. The treated grain is readily accepted by birds.
